
Create
an innovative learning portfolio.
Reflect
on one's progress.
Design
an efficient project workflow.
Deconstruct
one's biases.
Judge
efficiency of sampling techniques.
Assemble
a team of experts.
Use
techniques that match one's strengths.
Integrate
compliance with regulations.
Determine
relevance of results.
Generate
a log of daily activities.
Predict
one's response to culture shock.
Carry out
pH tests of water samples.
Differentiate
high and low culture.
Check
for consistency among sources.
Identify
strategies for retaining information.
Clarify
assembly instructions.
Provide
advice to novices.
Select
the most complete list of activities.
Recall
how to perform CPR.
Classify
adhesives by toxicity.
Respond
to frequently asked questions.
Recognize
symptoms of exhaustion.
Summarize
features of a new product.
List
primary and secondary colors.
metacognitive
Knowledge of cognition in general as well as awareness and knowledge of one's own cognition.
procedural
How to do something, methods of inquiry, and criteria for using skills, algorithms, techniques, and methods.
conceptual
The interrelationships among the basic elements within a larger structure that enable them to function together.
factual
The basic elements students must know to be acquainted with a discipline or solve problems in it.
The Knowledge Dimension
create
Put elements together to form a coherent whole; reorganize into a new pattern or structure.
evaluate
Make judgements based on criteria and standards.
analyze
Break material into constituent parts and determine how parts relate to one another and to an overall structure or purpose.
apply
Carry out or use a procedure in a given situation.
understand
Construct meaning from instructional messages, including oral, written, and graphic communication.
remember
Retrieve relevant knowledge from long-term memory.
The Cognitive Process Dimension

Bloom's Taxonomy: The Knowledge Dimension × The Cognitive Process Dimension

Accessible, text-based version of the original staircase infographic. Each cell shows an example learning objective combining one type of knowledge with one cognitive process.

Each row represents a type of knowledge (factual, conceptual, procedural, or metacognitive) and each column represents a cognitive process (remember, understand, apply, analyze, evaluate, or create). Reading across a row shows how objectives involving the same type of knowledge increase in cognitive complexity from left to right. Reading down a column shows how the same cognitive process applies to increasingly abstract types of knowledge from top to bottom.

Knowledge \ Process	Remember	Understand	Apply	Analyze	Evaluate	Create
Factual	List primary and secondary colors.	Summarize features of a new product.	Respond to frequently asked questions.	Select the most complete list of activities.	Check for consistency among sources.	Generate a log of daily activities.
Conceptual	Recognize symptoms of exhaustion.	Classify adhesives by toxicity.	Provide advice to novices.	Differentiate high and low culture.	Determine relevance of results.	Assemble a team of experts.
Procedural	Recall how to perform CPR.	Clarify assembly instructions.	Carry out pH tests of water samples.	Integrate compliance with regulations.	Judge efficiency of sampling techniques.	Design an efficient project workflow.
Metacognitive	Identify strategies for retaining information.	Predict one's response to culture shock.	Use techniques that match one's strengths.	Deconstruct one's biases.	Reflect on one's progress.	Create an innovative learning portfolio.
