Inner Circle - Category of Learning
2nd Circle - Action Verbs
3rd circle - Example Learning Outcomes
Outer circle - Example Learning activity

Bloom's Taxonomy for Health Profession Education

Accessible, text-based version of the original wheel infographic. Content is organized from lower-order to higher-order thinking skills: Remember, Comprehend, Apply, Analyze, Evaluate, Create.

This diagram organizes learning by six categories, arranged from foundational to higher-order thinking skills. For each category, four layers of information are provided: the category of learning, associated action verbs, example learning outcomes, and example learning activities.

1. Remember

Action verbs

Label, Identify, State, Outline, Write, List.

Example learning outcomes

- Define a term
- Recall steps in procedures
- List equipment to perform the procedure
- Select an instrument
- Identify organs
- Recognize a disease

Example learning activities

Lectures, e-Learning, pre-class reading, MCQs.

2. Comprehend

Action verbs

Summarize, Estimate, Infer, Discuss, Explain, Relate.

Example learning outcomes

- Interpret a medical report
- Write a report on xyz
- Explain contributing factors
- Summarize the physiological mechanism of xyz
- Discuss the symptoms of exhaustion

Example learning activities

Lectures, Group discussion, MCQs, Short answers.

3. Apply

Action verbs

Use, Prepare, Produce, Order, Examine, Apply.

Example learning outcomes

- Operate an ultrasound machine

- Relate factors in differential diagnosis
- Perform steps in a procedure
- Order an appropriate medical test based on symptoms

Example learning activities

Team based learning, Case study, Clinical observation.

4. Analyze

Action verbs

Summarize, Contrast, Critique, Compare, Classify, Analyze.

Example learning outcomes

- Differentiate between two types of eye infection
- Compare the healthcare policies on patients
- Analyze the relationship between x and y
- Relate patient's symptoms to side effects of medication

Example learning activities

Role play, Peer review, Case study, Reflective writing.

5. Evaluate

Action verbs

Recommend, Prepare, Propose, Formulate, Choose, Assess, Evaluate.

Example learning outcomes

- Select most effective treatment
- Evaluate research validity
- Critique clinical process
- Assess the condition severity

Example learning activities

Simulation exercise, Learning portfolio, Critical appraisal.

6. Create

Action verbs

Resolve, Produce, Facilitate, Design, Construct, Compose.

Example learning outcomes

- Design a process for a novel treatment
- Reconstruct a broken bone
- Write a patient history based on disjointed data
- Revise process to improve outcomes

Example learning activities

Research proposal, Medical simulation, Case creation.

About this diagram

In the original wheel graphic, the diagram is arranged in four concentric layers: the inner circle shows the category of learning; the second circle shows associated action verbs; the third circle gives example learning outcomes; and the outer circle gives example learning activities for assessing or teaching that category.
